**GENERAL DESCRIPTION**

The 4558 integrated circuit is a dual high gain operational amplifier internally compensated and constructed on a single silicon chip using the planar epitaxial process.

Combining the features of the 741 with the close parameter matching and tracking of a dual device on a monolithic chip results in unique performance characteristics. Excellent channel separation allows the use of the dual device in single 741 operational amplifier applications providing the highest possible packaging density. It is especially well suited for applications in differential-in, differential-out as well as in potentiometric amplifiers and where gain and phase matched channels are mandatory.

NOTE 1: Rating applies for case temperatures to  $125^{\circ}C$ , derate linearly at  $6.5mW/^{\circ}C$  for ambient temperatures above  $+75^{\circ}C$  for RM4558.

NOTE 2: For supply voltages less than  $\pm 15V$ , the absolute maximum input voltage is equal to the supply voltage.

NOTE 3: Short circuit may be to ground on one amp only. Rating applies to  $+125^{\circ}C$  case temperature or  $+75^{\circ}C$  ambient temperature for RC4558 and to  $+85^{\circ}C$  ambient temperature for RV4558.
